

Solution Brief

CMMC 2.0 Level 2 Compliance Made Simple: A Scalable Solution for MSPs and MSSPs

Automate compliance readiness
and drive business growth

Why CMMC 2.0 Compliance is Critical

CMMC 2.0 Level 2 compliance, aligned with NIST SP 800-171, requires 110 cybersecurity controls to protect Controlled Unclassified Information (CUI). Depending on the contract, your Defense Industrial Base (DIB) clients must complete either a self-assessment or a third-party certification (C3PAO) to maintain eligibility for existing contracts and to compete for new Department of Defense opportunities.

Starting November 10, 2025, the Department of Defense will start enforcing the [phased roll out](#) of CMMC 2.0 compliance, as outlined below:

Phase	Deadline	Requirement
Phase 1	November 10, 2025	All applicable solicitations will require either a Level 1 or Level 2 self-certification, depending on the type of data being handled
Phase 2	November 10, 2026	The DoD will begin requiring Level 2 C3PAO certification for certain contracts.
Phase 3	November 10, 2027	The DoD will continue Phases 1 and 2 and start implementing Level 3 requirements.
Phase 4	November 10, 2028	At full rollout, all DoD contracts will be assigned a CMMC 2.0 level, and contractors must meet its requirements.

For MSPs, this creates a major opportunity to help clients achieve and maintain compliance, strengthen their cybersecurity posture, and protect their revenue streams in the federal supply chain. Without automation or standardization, this process can be time-consuming and difficult to scale. However, with the right tools and approach, compliance demands can become a growth opportunity, solidifying your role as a trusted CMMC 2.0 partner.

The Solution to CMMC 2.0 Level 2 Complexity

Cynomi's vCISO platform empowers MSPs to transform CMMC 2.0 Level 2 compliance from a client hurdle into a scalable, profitable service.

Powered by AI and cybersecurity best practices, the platform automates and standardizes the compliance readiness journey, enabling you to efficiently support and manage more DIB clients without adding resources.

Get the structure and tools needed to guide clients toward audit readiness with clarity and precision.

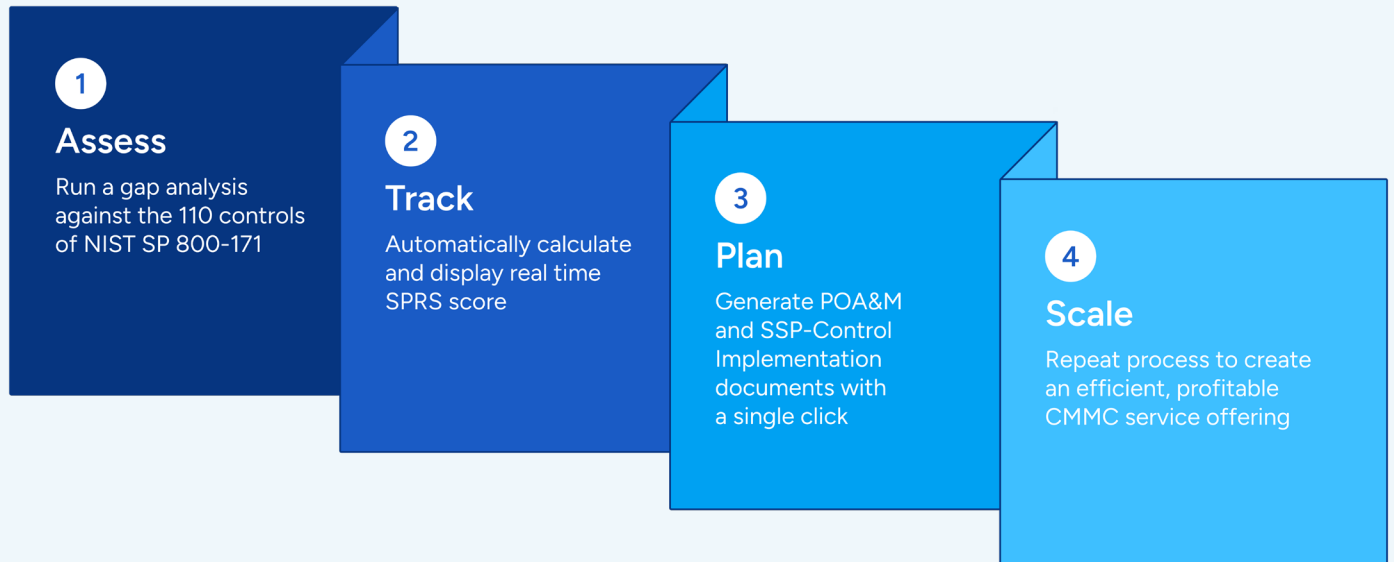

Key Capabilities

- ✓ Track and Report SPRS Scores
- ✓ Generate Actionable POA&M
- ✓ Create SSP Control Implementation Report

Simplify Compliance, Gain a Competitive Edge

Cynomi offers critical features to streamline CMMC 2.0 Level 2 readiness, turning complex requirements into manageable, automated workflows:

- **Automate Supplier Performance Risk System Score Calculation:** Cynomi automates the DoD's scoring methodology (SPRS), displaying scores in a clear, intuitive graph. This at-a-glance metric helps track progress toward the minimum score required for assessment.
- **Generate POA&M with a Single Click:** Cynomi simplifies the creation of the mandatory Plan of Action & Milestones (POA&M) document. With one click, it formats security improvement tasks into the required CMMC document.
- **Create the Control Implementation Section of the SSP:** Cynomi generates the "Control Implementation" section of the System Security Plan (SSP), a critical and often lengthy audit document, directly from the security work tracked within the platform.

Transforming Compliance into a Revenue Stream

Cynomi helps you grow your business by turning CMMC 2.0 Level 2 compliance into a scalable, high-value service offering. With automation, standardized workflows, and real-time visibility, you can deliver faster, more consistent results, strengthen client trust, and increase recurring revenue without adding overhead.

Increase revenue:

Capitalize on the urgent market demand for CMMC readiness by offering a structured, high-value compliance service to a vast market of DoD contractors.

Improve efficiency:

Automate manual, time-consuming activities, from scoring to reporting, to instantly get actionable insights and a prioritized task roadmap.

Scale your Services:

Leverage a standardized framework to deliver consistent, high-quality CMMC readiness services across your entire client base.

Demonstrate expertise:

Use automated, data-backed reporting to provide clear proof of progress, build client trust, and reinforce your position as a strategic security partner.

About Cynomi

Cynomi is the central cybersecurity and compliance management hub for MSPs and MSSPs, empowering them to scale cybersecurity activities and ensure more clients achieve better protection.

Powered by AI that is infused with seasoned vCISO knowledge, Cynomi's platform streamlines cybersecurity management, automating time-consuming tasks to boost productivity and enhance service quality.
