

Cynomi CISO Intelligence and AI Agents

The Intelligence Layer That Scales Your Cyber Advisory and vCISO Practice

Delivering high-quality cybersecurity services at scale remains a core challenge for MSPs and vCISO practices, as demand grows faster than available expertise. Most platforms respond with AI, automating compliance or adding chatbots, but these approaches still require teams to interpret and execute. **What service providers need isn't another assistant, but a way to scale expertise.**

How Cynomi Transforms Security Delivery

Cynomi provides an embedded intelligence layer that brings the decision-making logic of an experienced security and business growth leader directly into your platform. This transforms your security delivery from a manual, expertise-bound process into a scalable, repeatable operating model, using a combination of three types of agents:

Embedded Insights

Embeds intelligence directly into workflows

Coworking

Produces full deliverables to support in-house experts

Autonomous

Delivers autonomous security and GTM workflows

Key Capabilities

Most platforms focus on compliance automation or assistant-style AI. Cynomi's AI-based multi-agent system embeds intelligence directly into workflows and produces real outcomes.

This shifts teams from interpreting data to acting on it bringing clarity, execution, and impact into every workflow.

Here are the agents we're building to deliver insight, execution, and scale across your workflows.

What Makes Cynomi Different

Multi-agent system, not a single assistant

Specialized agents across the platform, each responsible for a distinct layer of expertise.

From insight to execution to deliverables

Complete outputs, ready to deliver to clients vs. just recommendations/automation.

Embedded intelligence, not a separate interface

AI lives inside tasks, assessments, dashboards, and reports. No stepping outside your workflow.

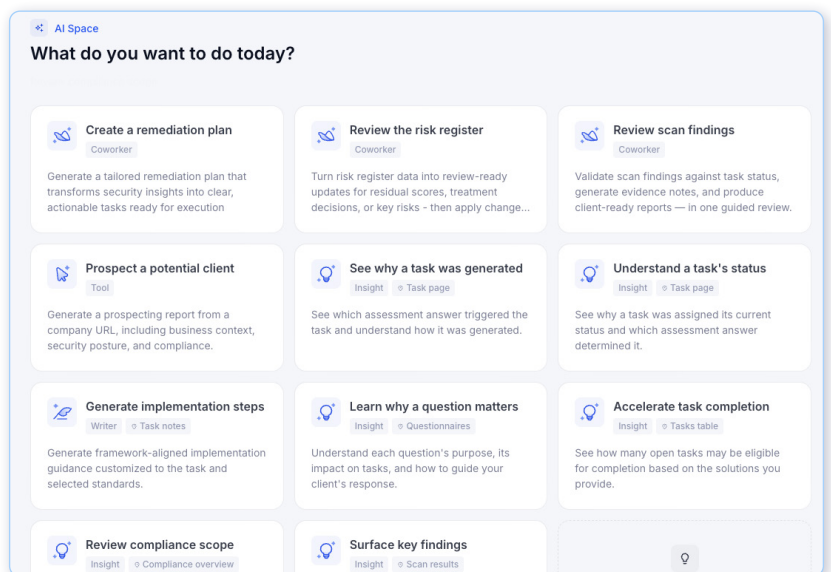

Explainability as a foundation

Show why tasks exist, statuses change, and decisions are made.

Security and GTM connected

Risk surfaces as service opportunity. Your entire portfolio shows where to grow.

Cynomi AI Space

Cynomi Insights

The platform understands your client

Cynomi surfaces context and guidance in real time without requiring prompts.

For Security workflows: Empower junior team members to operate with senior-level situational awareness on every task.

- Explains why tasks exist and what triggered them
- Shows the impact of assessment answers and decisions
- Identifies compliance gaps and opportunities
- Highlights where risk is concentrated and remediation priorities

For GTM workflows: Walk into every client and prospect meeting with the analysis already done.

- Surface client security gaps and connects them to service opportunities

Cynomi Coworkers

The platform builds and delivers with you

Cynomi expands from insight into execution through an AI-powered expert toolkit that produces full deliverables alongside your team and includes:

- **Implementation Guidance Agent:** Generates framework-aligned implementation guidance that can be inserted into task notes.
- **Prospecting Agent:** Turn a company domain into a security and compliance snapshot for data-backed client conversations.
- **Policy Agent:** Audits and generates complete policies using platform data and gap analysis.
- **Risk Agent:** Recalibrates risk scores, key risks and treatment plans.
- **Remediation Agent:** Delivers prioritized plans with owners and dependencies.
- **Reporting Agent:** Produces client-ready reports customized by audience.
- **Findings Agent:** Consolidates scanner data and translates this into prioritized, actionable next steps.

Move from hours of work to minutes of review and scale your expertise without increasing workload or headcount.

Summary

By combining Insights that explain, coworkers that execute, and a future of autonomous security operations, Cynomi enables service providers to deliver higher-quality security services, operate more efficiently, and grow their business without being constrained by headcount or expertise gaps.
