

Cynomi Compliance Management: Security-First Compliance, Without the Typical GRC Overhead

Delivering compliance services at scale shouldn't slow your business down, but for many service providers, it does. Manual assessments, duplicated framework mapping, custom remediation plans, and time-intensive reporting make compliance costly, inconsistent, and hard to scale as your client base grows.

At the same time, compliance expectations continue to rise, with even non-regulated clients wanting to demonstrate compliance to popular frameworks to drive credibility. Traditional GRC platforms weren't built for this model. Designed for audit-led workflows and heavy customization, they add friction instead of efficiency.

Compliance as an Outcome of Security

Cynomi takes a different approach, enabling you to deliver compliance as part of a continuous cybersecurity program. Assess once, track progress across multiple frameworks, and automatically turn security execution into compliance readiness, without the overhead of a standalone GRC platform. As remediation tasks are completed, policies are implemented, and risks are reduced, compliance posture updates automatically. This keeps clients continuously audit-ready while allowing MSPs to focus on what actually reduces risk.

Key Capabilities

Cynomi delivers the core capabilities MSPs need to operationalize compliance at scale while tying compliance directly to security work.

Platform Capability	What It Enables
Multi-Framework Compliance Support	Assess once and track progress across 40+ frameworks simultaneously, without duplicate work or separate compliance projects.
Automated Framework Mapping	Map security tasks, controls, and policies automatically to relevant compliance requirements, keeping posture current as work is completed.
Guided Compliance Assessments	Surface compliance gaps quickly through context-aware questionnaires and assessments, without overwhelming clients or teams.
Automated Remediation Planning	Translate compliance gaps into prioritized, actionable task plans aligned to both risk and framework requirements.
Built-In Policy Generation and Alignment	Generate and align policies to supported frameworks, reducing manual documentation and rework.
Embedded CISO Expertise	Guide prioritization and sequencing using real-world CISO decision logic, without requiring deep GRC specialization.
Continuous Compliance Tracking	Update compliance posture dynamically as remediation progresses, supporting year-round readiness instead of point-in-time audits.
Executive and Audit-Ready Reporting	Deliver clear, professional reports that show compliance status, progress, and next steps to make sure you're ready for leadership reviews and audit preparation.

Why Service Providers Choose Cynomi for Compliance Delivery

Broad Framework Coverage, Built In

Cynomi supports more than 40 cybersecurity and compliance frameworks, allowing our partners to serve a wide range of client requirements without changing tools or processes.

Because frameworks are mapped automatically to security domains, tasks, and controls, you don't need to manually cross-reference requirements or maintain separate tracking systems. One security program can support multiple compliance lenses at the same time.

Built-In CISO Logic, Not GRC Bureaucracy

Cynomi embeds experienced CISO decision-making into its workflows. Instead of forcing you to design compliance programs from scratch or interpret dense regulatory language, the platform guides what to prioritize, what matters most, and how to sequence work based on risk and impact.

This enables you to deliver credible compliance services with defensible outcomes, by empowering the expertise of your existing team - not hiring expensive compliance-only experts.

Clear Reporting for Audits and Executives

Compliance progress is translated into clear, professional reporting that works for both auditors and business leaders. Service providers can show where a client stands, what has been completed, what remains, and how security actions map directly to compliance requirements.

Because reporting is generated from live platform data, it stays accurate, consistent, and easy to update, supporting audits, QBRs, and executive discussions without manual effort.

Built for the Your Reality

Cynomi was designed for service providers managing many clients with varying maturity levels, not for enterprise compliance teams running constant audits. Cynomi delivers the compliance outcomes you need - faster, more affordably, and with far less operational overhead.

Why Our Partners Love Cynomi

- ✓ **From Assessments to Programs**
Turn one-time findings into structured, risk-driven remediation roadmaps that power recurring services.
- ✓ **Standardized, Defensible Action**
Deliver consistent security outcomes across all clients without relying on individual expert heroics.
- ✓ **Security Teams Can Execute**
Translate complex frameworks into clear, actionable tasks technical teams actually follow.
- ✓ **Executive Buy-In Built In**
Align security work to business risk, priorities, and outcomes that leaders care about.
- ✓ **Fast, Intuitive Adoption**
Wizard-driven experience enables rapid onboarding for partners and customers.
- ✓ **Revenue Growth Engine**
Built-in opportunity identification, business translation, and proof of value.
- ✓ **Scalable Operational Efficiency**
Eliminate spreadsheets and manual work with a platform designed for scale.
- ✓ **Partner-Only, No Conflict**
We carry the complexity, you take the credit—100% channel-first, always.
