

# Provide vCISO Services at Scale

## With the world's first AI-driven, automated vCISO platform

Growing cyber threats, tightening regulatory demands and strict cyber insurance requirements are driving SMB and SME demand for vCISO services from managed service providers and consulting firms. Yet current vCISO services models rely on human CISO expertise and manual work. This makes these services costly and tough to scale – leaving service providers unable to meet all customer vCISO needs.

### Stand Out and Scale Up with Cynomi

Cynomi enables managed service providers and consulting firms to provide ongoing risk assessments and vCISO services at scale - without scaling their existing resources. Cynomi's AI-driven, multitenant platform automatically generates everything a vCISO needs:

#### Tailored security policies

Easy-to-follow, actionable security policies, based on your client's cyber profile, relevant regulatory requirements and industry benchmarks.

#### Prioritized remediation plan and tasks

A customized, prioritized, remediation task list for each client, with impact and criticality rate for each task. Tasks are completely editable.

#### Ongoing task management and progress tracking

Ongoing remediation task management, collaboration and progress tracking tools.

#### Vulnerability and exploit gap analysis

Illuminates the vulnerabilities to which each client is exposed and prioritizes remediation steps.

#### Customer-facing reports

Exportable customer-facing status and progress reports with your brand, for customer stakeholders – operations and management alike.

#### Full multitenancy

Create and manage accounts for each of your clients from a single dashboard, and manage access and roles for each client.

### Benefits

#### Scale revenues

Offer ongoing vCISO Services at scale to secure recurring revenues, while significantly reducing dependence on in-house, manual and time consuming CISO work

#### Increase upsells

Cynomi's findings and recommendations substantiate upsells of your services and tools, demonstrating tangible impact

#### Minimize churn

Offer continuous, strategic services that increase customer trust and satisfaction

#### Increase sales pipeline

Leverage Cynomi's comprehensive risk and compliance assessments to drive new opportunities

# How Cynomi Works

## Automated Cyber Profile

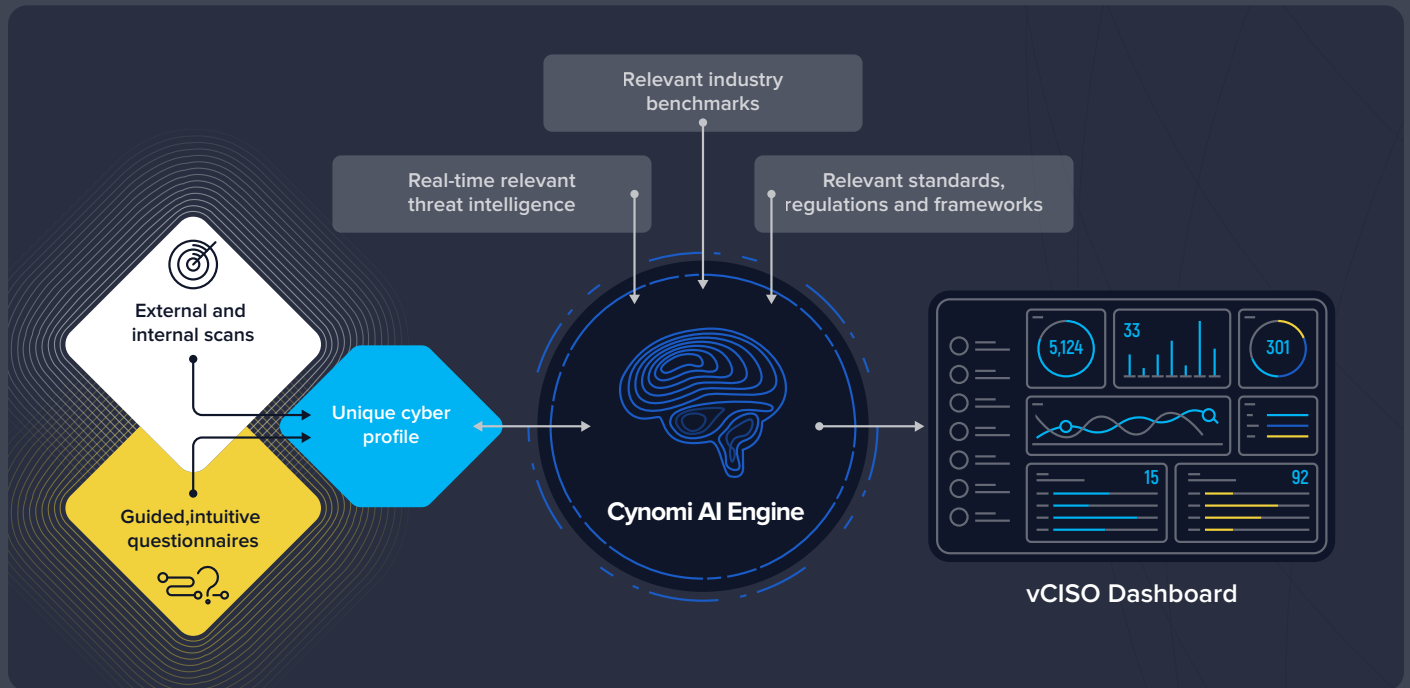

After an initial discovery questionnaire, Cynomi automatically generates for each of your clients easy to follow relevant questionnaires and express scans (internal and external). Based on the answers and scan results – Cynomi automatically builds a unique cyber profile for each client.

## AI-Driven Assessment

The Cynomi engine's proprietary AI algorithms, modeled after the knowledge of the world's best CISOs, continuously parse each client's cyber profile against relevant external resources like the NIST Cybersecurity Framework, ISO 27001, CIS and other standards, industry benchmarks, and industry-based threat intelligence.

All data is updated continuously by the Cynomi engine in-line with changes in the customer environment or processes, and as new vulnerabilities, compliance requirements, or changes in the relevant industry threat landscape emerge.

## Why Cynomi?

### Focus on execution

Cynomi automates and accelerates manual vCISO work like assessments and remediation plans – leaving your team free to focus on ongoing execution.

### Show value over time

Cynomi continuously measures each client's security posture and risk level, so you can show progress and demonstrate your value over time.

### Understand the impact

Cynomi prioritizes tasks and shows the impact of each, so you can better decide where to expend each client's resources for maximum results.

### Maintain compliance

Cynomi performs automated compliance readiness assessments for each client, then creates an actionable plan with prioritized task list to achieve and maintain compliance, and track progress.
